These are good examples of individual daily tasks but i need to see the entire lesson plan. It all comes from a large source and probably has a bunch of different formats internal to it. I need that so i can understand how to consume the whole thing and make it available to the teachers/students on a daily basis. I also need to understand what documentation requirements are needed for the lesson plans. Do the teachers have to documents what all they do to change the plan, report how effective it was, suggestions for changes?

I also need to understand what level of flexibility the teach has with the lesson plan. Can the teacher choose the order of the lessons as long as all of the material is covered? What happens when a section takes too long because the kids aren't prepared? How far into the future is the plan manipulated?

Walter, This is Alex. It's super cool to hear from you! Glad to have you back!

I hope the vacation was amazing. Our family had the chance to visit Progreso, Cozumel, the Cayman Islands, and Jamaica all from Galveston. Each trip was a super fun experience. Hopefully, we can trade tons of travel stories over time.

I work over at Memorial and have two hours commuting round trip. So I will usually respond around this time (7:30 pm to 9 pm).

I will do my best to respond the same day: unless I am traveling.

Thank you! The questions that you have asked are sharp and direct. I will try my best to answer as many as I can. If you have any questions or concerns that need to be answered by phone call do not hesitate to reach out to me at any time. My phone number is 201-889-4964 in case you need to reach me. Anytime is fine with me.

I have copied and pasted your questions below to ensure that I answer them correctly.

1. I need to understand what level of flexibility the teacher has with the lesson plan.

Teachers can be highly flexible or very constrained by their lesson plans.

This is usually the result of two reasons. The first being the strictness of the administration. Some schools do not take lesson plans lightly and will tend to pay extra negative attention to teachers who deviate from what they put to paper.

More lenient schools allow for more deviation from the plan. The best teachers tend to have the least amount of deviation from their daily or weekly plans regardless of the leadership.

The second being the teacher's temperament and personality. A more undisciplined teacher will be more likely to deviate. This behavior can lead to an increased potential for negative outcomes such as saying or doing something that would trigger a negative response from a challenging student, a difficult parent, or a school administrator. Whenever you read in the paper that a teacher has done something misguided in their classroom this is usually the cause. That is also why many administrators check this behavior by focusing heavily on planning.

2. Can the teacher choose the order of the lessons as long as all of the material is covered?

There is something called a scope and sequence that is released at the beginning of the year. This scope and sequence will layout how much time will be spent and on what throughout the entire year. It ensures that as many state standards as possible are being taught throughout the year.

It accomplishes this by breaking things down into thematic units. For example in 8th Grade US History:

- Unit 1: Early Americans (3 weeks)
- Unit 2: European Exploration (3 weeks)
- Unit 3: Colonization (2.5 weeks)

Teachers can spend additional time on state testable concepts or if students struggle in understanding a concept. This, however, leads to rushing through other things later on. Teachers can also combine lessons if they are simple enough to do. Teachers can teach a concept before another one in the units. But never outside of them.

As a parent, you may have heard of a course syllabus. This is given to middle school and higher grade level students at the beginning of a course. It is the public-facing and much shorter version of the scope and sequence.

No worries, if this is overwhelming. I will put a visual at the bottom of this email if this is too much information.

3. What happens when a section takes too long because the kids aren't prepared?

The teacher will usually reteach a concept if the quiz that they give or the task that they ask the students to complete reveals that students are not learning. The teacher is, however, running a race with the time limits laid out by the scope and sequence. When you spend more time on a concept other things are left undone or rushed through. Sometimes you have to cut your losses and move on even if you know that the kids aren't 100% there. The logic being that you can hopefully revisit this topic within the context of another lesson. A math teacher may not feel comfortable that their kids haven't mastered addition but will assume that the topic can be revisited at a later time.

4. How far into the future is the plan manipulated?

Have you ever ran on a hilly course. At Cherry Point, in North Carolina, I ran a PFT while in the Marines. It was one hill followed by another. My goal was to make it to the top of the next hill in front of me. Teaching is the same logic.

You are aiming to make it to Friday. Over and over and over. The most I have ever planned ahead is 3 weeks. This was when I taught using a controversial system called project-based learning. I will not overload you cause that is a topic for a whole other day! LOL.

But when I planned for three weeks ahead I would adjust my expected time to complete the unit by a day or two max. Remember time borrowed has to be made up later somehow.

5. I also need to understand what documentation requirements are needed for the lesson plans.

Teachers usually post their lesson plans on a shared drive using Google. However, many schools have them post them on programs such as Eduphoria.

Example of a weekly lesson plan in

Eduphoria. Weekly lesson plans are made up of 5 daily lesson plans.

Example of a daily lesson plan

template in Eduphoria.

The lesson plans that I and Olay shared are weekly lesson plans. Each was made up of 5 separate daily lesson plans.

5. These are good examples of individual daily tasks but I need to see the entire lesson plan.

I think that the best way to do this is to actually teach a lesson using a lesson plan so that you can see the relationship between the plan and the teacher actions. I would be extremely honored, as would Olay, to join you for a meeting that fits your schedule and location requirements. As a team, it would be awesome and powerfully rewarding to work together to not only demonstrate, but also analyze, and thoroughly answer any questions that you may have.

6. I need to understand how to consume the whole thing and make it available to the teachers/students on a daily basis.

Completely agreed. I will include some visual maps that will hopefully get you a bit closer. But I think this is one of those things that a brief Starbucks meeting for 30 minutes would really clarify more precisely.

7. Do the teachers have to document what they do to change the plan?

Usually no. But some administrators like my last principal can be so overbearing that they will check for changes. Teachers can be asked to write in changes that would lead to potential conflicts with school policy and to seek prior approval. This is usually the hallmark of an extremely authoritative school principal. The vast majority of principals over my 12 years teaching do not go this far.

8. Do they have to report how effective it was? Suggestions for changes..

There is usually a discussion during the weekly department and also grade level meetings in which you discuss how effective the lesson was. This is when ideas and suggestions to improve the next set of lesson plans occurs. There is no other form of reporting.

MY THOUGHTS

Lesson plans differ by the topic being taught, and schools/districts. Focus on the two that Olay and I have generated.

There are many variations of lesson plans which can cause a lot of confusion. There are k-3 style lesson plans, Grades 3-5 lesson plans. Ignore those.

The lesson plans that we are after are for students in the 6th grade and above.

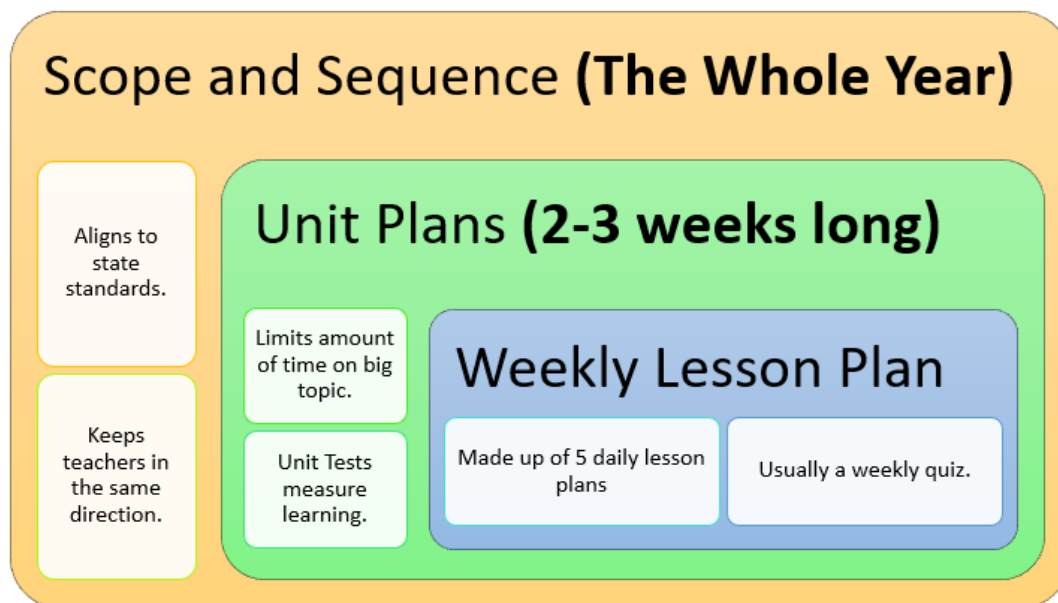

I have shared a weekly lesson plan and daily tasks that correspond to it.

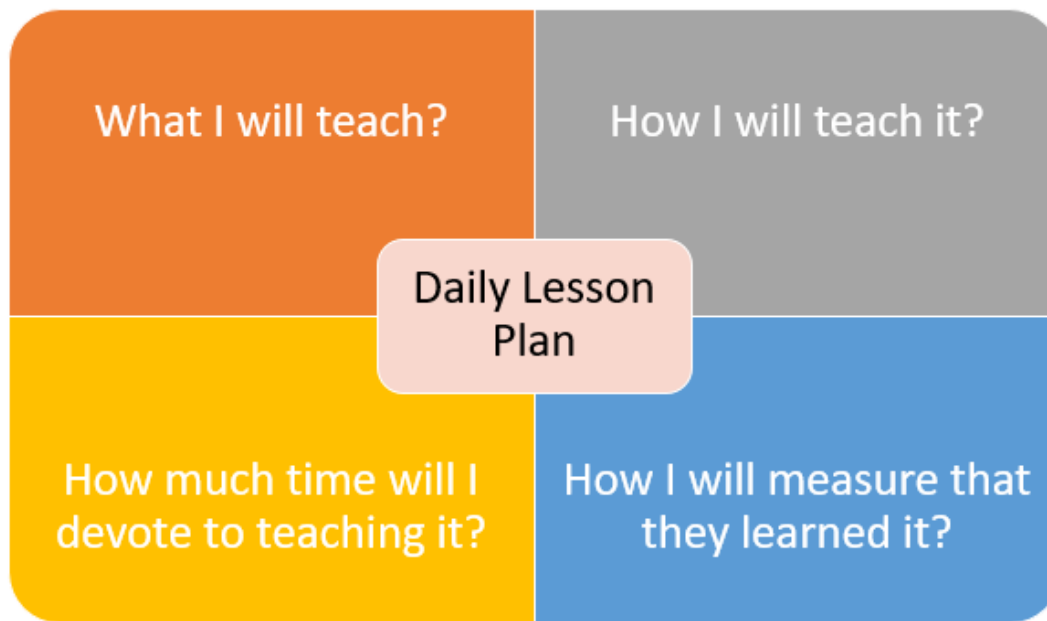

I look forward to working with you on this puzzle. Just focus on the relationship between two documents. The lesson plan and the daily task. That's the key. The rest is generic app-building: menus and server requirements etc that you have seen and have experience with. How to pull data from one to populate the other. That's the keystone.

The rest is simply following the Invision layout. Don't worry about having it even having the rest fully fleshed out. That one event generating a plan from a daily task is enough to change the lives of a million or more teachers. It would be the equivalent of finding oil underneath your house.

Olay and I -for example- typed those plans we shared. For me, it took an hour. For Olay maybe the same amount of time. This does not include the creation and gathering of materials. Or modifying them. This can stretch out a couple of hours or more.

Visual Explanations:

Questions that a daily lesson plan addresses.

Our goal is to simplify weekly lesson planning by making each daily lesson plan and the subsequent resource gathering process instantaneous.

From hours to two or three clicks. To become the Amazon of teacher planning and resource gathering. There are even more noble reasons as you have heard.

But for the here and now, we can focus on the task of populating information for one document using the properties or metadata from the other. That's it.

You got this. We believe in you and the power of your creativity and ability. I wouldn't have spent the last two hours typing this email otherwise! Looking forward to working with you in leaving our mark on education.

Alex.
